A. Product Description

A Knock-Out Warrant Call (closed-end) requires a low level of capital investment and therefore enables investors to participate with a leverage in the price performance of the Underlying. It can be used as speculative instrument or for hedging purposes. With a Knock-Out Warrant Call (closed-end) the Holder profits from rising prices of the Underlying. A Knock-Out Warrant Call (closed-end) has a fixed Redemption Date. If the Underlying reaches or falls below the Strike Price at any time during the life of a Knock-Out Warrant Call (closed-end), the Knock-Out Warrant Call (closed-end) expires immediately and the residual value is zero.

B. Prospects for Profits and Losses

Market expectation

A Knock-Out Warrant Call (closed-end) offers the possibility to benefit from changes in the prices of the Underlying with a leverage effect. Investors in a Knock-Out Warrant Call (closed-end) expect the Underlying price to rise.

Risk tolerance

Due to the leverage effect, the value of the Knock-Out Warrant Call (closed-end) will fluctuate more than the value of the Underlying. An investment in a Knock-Out Warrant Call (closed-end) therefore bears a higher risk than a direct one to one investment in the Underlying. Investors in this product should be experienced investors being familiar with derivative products, leverage and the Underlying. Investors are willing to take a higher risk compared with a direct one to one investment in the Underlying in order to achieve a higher profit potential.

Profits potential

A Knock-Out Warrant Call (closed-end) benefits disproportionately from a positive price performance of the Underlying. The profit potential for a Knock-Out Warrant Call (closed-end) is unlimited.

Loss potential

Holders may lose some or all of their invested capital but the maximum loss is limited to the initial capital invested. A Knock-Out Warrant Call (closed-end) has a fixed maturity, but in case of the occurrence of a Knock-out Event, the Knock-Out Warrant Call (closed-end) will be automatically early redeemed at an amount equal to 0 (zero).

The risk for an investment in a Knock-Out Warrant Call (closed-end), which is significantly greater than it would be for a direct one to one investment, is based not only on the leverage effect, but also on the occurrence of a Knock-out Event. Please also review the Early Redemption and Issuer and Guarantor Risk factors below.

C. Significant Risks for Investors

General

An investment in the Certificates involves a high degree of risk, which may include, among others, price risks associated with the Underlying(s), interest rate, foreign exchange, market, time value and political risks.

Potential investors must have the knowledge and experience necessary to enable them to evaluate the risks and merits of an investment in the Certificates. Prospective investors should determine, based on their own independent review and such professional advice (including, without limitation, tax, accounting, credit, legal and regulatory advice) as they deem appropriate under the circumstances, that the acquisition and holding of the Certificates (i) is fully consistent with their financial needs, objectives and condition, (ii) complies and is fully consistent with all investment policies, guidelines and restrictions applicable to them and (iii) is a fit, proper and suitable investment for them, notwithstanding the clear and substantial risks inherent in investing in or holding the Certificates. In making such determination, an investor should consider carefully all the information set forth in the Final Terms and the Base Prospectus.

No Capital Protection

The Certificates are not capital protected at any time. There is a risk of partial or total capital loss, and therefore an investment in the Certificates is highly speculative, involving significant risk, including the possible loss of the amount invested, and should therefore only be considered by persons who can afford a loss of their entire investment.

Index Linked Risks

An investment in Certificates linked to an Index entails significant risks not associated with an investment in a conventional debt security. On redemption Holders will receive an amount determined by reference to the value of the Underlying, the Conversion Rate and the leverage. Potential investors should take advice accordingly. The movements in the level of an index may be subject to significant fluctuations that may or may not correlate with other indices, changes in interest rates or currencies and the timing of changes in the relevant level of the index may affect the actual return to Holders, even if the average level of the index is consistent with their expectations.

Early Redemption

The Terms and Conditions in the Base Prospectus provide for early redemption on the occurrence of force majeure, illegality and certain other events affecting the Underlying and/or the hedge, whereupon the Calculation Agent shall calculate the fair market value of each Certificate less the cost to the Issuer and/or its affiliates of unwinding any underlying related hedging arrangements, all as determined by the Calculation Agent in its sole and absolute discretion. Payment will be made in such manner as shall be notified to Holders in accordance with Condition 10 of the Certificates as set out in the Base Prospectus.

The amount that Holders receive as a consequence of such early redemption may be less than the initial capital invested per Certificate and even zero. Holders who choose to reinvest monies received as a consequence of early redemption of the Certificates may be able to do so only in securities with a lower yield than the redeemed Certificates.

Issuer and Guarantor Risk
